## **AIRCONE**

## Aircone Design Stefan Borselius

Aircone is a sound absorber with a simple graphic design. The pattern formed by combining several modules can be varied in a virtually infinite number of ways.

Aircone is made from compression-moulded fabric-covered fibre felt.

The modules are assembled together using small plastic clips.

Each module is angled and has a tapered shape, this diffuse sound waves, and the product thus helps create a better sound environment.

Aircone can be hung from the ceiling or against the wall on an aluminium rail.

There is a new module available, called "Aircone straight edges", which is used to create straight lines on your Aircone configuration.

## **Color Choices**

## Felt colors

-22 petrol
