Adapt to Work in Shared Spaces

The new forms of work; hybrid and remote models are causing lower office occupancy, increasing demand for shared office spaces, especially in smaller areas.

Need for Privacy

Exposure to noise pollution causes stress-related cardiovascular disorders. In shared offices, the need for quick escape, privacy, and concentration zones with small footprints is of great importance.

The Age of Meetings

Recent data shows that 83.13% of employees dedicate up to one-third of their work week to meetings. Of which; 41.8% spend 30 minutes to an hour in meetings on average, while 22.5% have meetings lasting up to two hours. This intense schedule creates a need for well-conditioned, multiple meeting spaces within offices.

Digital Communication

Virtual meeting rates increased from 48% to 77% between 2020 and 2022. The need for stable, secure connection and perfected conditions for back-to-back meetings arise.
